A routing system to boost tourism ... page 6

UP-FRONT NEWS

Dear Friends,
Dear Staff Members,

In this issue of *Forster Aktuell* we show you a totally satisfactory solution to a storage problem: the new City Archives of Augsburg. Look inside to find out how to produce a third more space from a shelving system that extends over two floors. Working at clean-room conditions is getting an absolute must in industrial screen printing: an ever greater number of Forster products are made under such conditions. The prerequisites and measures taken to achieve this situation are described on pp 14-15.

At the start of May we began to change over to electronic billing, a change necessitated on economic, ecological and organisational grounds. Naturally, our customers are asked to convert solely on a voluntary basis. We are convinced that e-billing will benefit you as well: it reduces waste and cuts down on the time needed compared to printed invoices. I wish to thank you for supporting this project.

One of the best seasons of the year has just started and there are innumerable ways to enjoy the days of summer. So if you have your holiday still before you I wish you a wonderful, relaxing time and a good and safe journey there and back.

Enjoy reading the latest news!

Yours,

Christian Forster
Managing Director of Forster Holding GmbH

CHANGEOVER TO ELECTRONIC BILLING

E-Billing

For economic, ecological and organisational reasons, Forster Verkehrs- und Werbetechnik GmbH has converted its invoicing system to electronic billing. We are confident that this changeover will also benefit our customers. This method ensures that the invoice will be reliably and transparently sent directly to its proper addressee.

Naturally it is not for us to decide how our customers want to get invoices from us, so we will present you with an e-bill only after you have given us your consent.

Trade show preview

This year's **KOMMUNALMESSE**, the trade fair for local governments, will have as its motto "Creating living spaces – shaping the future". Local authorities have a say in shaping the living space of their citizens and in this way affect the quality of their lives. A major factor is safety on Austrian roads. For decades Forster has given priority to developing and making products to improve road safety, and thanks to its efforts it has become a strong partner for local governments and their road maintenance departments.

When: 9 – 11 September 2015

Where: Vienna Exhibition Centre,
Messeplatz 1, 1021 Vienna, Austria
Hall/Stand: Hall C, 239, 246

The latest innovations and trends are found at the **SPS IPC Drives**, Europe's leading specialist fair for electric automation. Find us at our stand to hear about current developments in industrial screen printing. We present membrane keypads, decorative and front panel films, keyboard films on pc boards, printed electronics, punched parts and insulation films, front and supporting plates, sheets and casings.

When: 24 – 26 November 2015

Where: Nuremberg Exhibition Centre,
Karl-Schönleben-Str.,
Messeplatz 1, 90471 Nuremberg, Germany
Hall/Stand: 8-624

Trade show review

Officials from state and local governments as well as road maintenance staff have made it a habit to attend the **ASTRAD & austroKOMMUNAL** organised every two years. We always look forward to the many interesting exchanges with visitors. And as always our traffic engineering products were much sought after. This year's highlights: our bend point tube (BPT) adapter fitted with a predetermined kink point in tubular uprights and the fracture-proof road traffic safety mirror.

The **REGAL Branchentreff** forum, comprising a symposium, trade fair, supermarket news platform and expert talks on practical applications, operates as a highly useful exchange for everybody interested in shelving. Forster used its info stand to present individual solutions in a wide range of formats and designs, all excellently suited to showcase the POS through the use of displays, illuminated advertising, floor films and lenticular prints.

ALLROUNDER FOR ADVERTISING

Three cheers for the film

Sheet film has loads of uses in advertising. No matter what requirements need to be met there is a suitable material that has just the looked-for properties. Whether used in the long or short term, indoors or outside – the allrounder can deliver.

Sheet film can be easily applied to almost every base material. Typically you don't even see that a film has been used. And the material is getting ever "greener": Forster has been changing over to PVC-free film and is using solvent-free ink for digital printing. And film has another greatly appreciated merit: if you need to change the motif it can be done in a flash: simply cover the space with a new film.

The projects shown below offer a glimpse of the bandwidth of options where film is a good choice.

Advertising lift-off

All of Austria was in a fever for the final of the 60th Song Contest. Austrian Airlines, the official airline of the 2015 contest, used its fleet of aircraft as ambassadors for the grand event.

At 11,920 metres up in the air, the maximum cruising altitude of the Airbus A 320 that served as "illustrated ambassador", the imprinted film was exposed to extreme conditions. Forster's long experience in printing special film was thus one of the reasons for getting the contract. The 3M aircraft film applied and digitally imprinted for this case is particularly suitable for attaching on level

and bent surfaces. It uses a special technology that allows easy positioning during attachment. At a temperature resistance of -60°C to +65°C, the 3M aircraft film is optimised for use on passenger planes. As a result, the film that advertised the Song Contest easily held out against the strain. 

"There's a lot of green in the yellow"

Forster recently attached the signage for a sustainability campaign to the new electric cars of Österreichische Post AG.

The Austrian postal service already boasts 862 environmentally friendly electric cars – the largest fleet of electric vehicles in Austria. Under the motto "There's a lot of green in the yellow", the service has 59 new electric cars cruising through Austria. The 3M film used is imprinted with a highly visible green tree to emphasise the motto. Putting the new signage on the fleet vehicles involved more than 500 metres of film, digitally imprinted and attached. 

Soaring high with Forster advertising panels

The Paul Außerleitner jump at Bischofshofen was fitted with advertising panels made by Forster. Placed on the largest jump of the Four Hills Tournament, they are exposed to extreme weather conditions.

To ensure that the panels would keep their appealing appearance for as long as possible they were coated with a specially laminated film that guarantees a remarkably long life and weather resistance. The panels are inscribed in several languages and come in different formats to do justice to the venue of the Twelfth-Day jump. And it goes without saying that Forster undertook the job of installing them on site.

New signage

Two pedestrian overpasses at Vienna Airport were fitted with a new digitally imprinted 3M film coat. Every year, 22.5m passengers pass underneath.

A surface of about 300 m makes the new advertising space visible from afar. Forster attached the film "in the dark of the night" in order to keep the nuisance level at the international hub to a minimum.

HOFER TRAVELS

POS displays whet the appetite for more

Hofer Reisen puts its trust in the decades of experience assembled by Forster. Reflecting Hofer's motto "I know what I want", all Hofer supermarkets were fitted with the new display made by Forster.

The brochure stand is an outstanding example of how to combine appearance with usefulness. The side designs can be replaced so that the display reflects the season or latest destinies. Already from a distance, the overall appearance helps whet customers' appetites for sun and fun.

The quick-exchange trays, available in several formats, and a specially shaped panel in the form of a suitcase offer additional flexibility, a bonus in terms of content as much as ease of use for the sales staff who profit from a simple, rapid-exchange system.

The RAL powder-coating of the display and the partial paint coat guarantee an appearance that is particularly long-lived, of high quality and perfectly aligned to the corporate design used by Hofer Reisen.

The brochure stand advertising Hofer Reisen ensures maximum flexibility, as it offers alternating side designs as well as trays in different formats.

HARMONIOUS COMBINATION OF WOOD AND ALUMINIUM

Tourist guidance systems in south-western Lower Austria

As a timely accompaniment to Lower Austria's 2015 Ötscher-themed exhibition, Göstling an der Ybbs and Gaming/Lackenhof were furnished with a new traffic routing system. The two communities are strongly focused on tourism (both rank among the 30 Lower Austrian destinations with the highest number of overnight stays), so that they need to show off their best side as soon as guests cross their boundaries.

The new routing system does just that. It impresses from afar through its felicitous yet unusual combination of wood and aluminium. Thanks to the timber used the signs are in harmony with the region and fully integrated in the landscape. The colour-

ful reflective film applied to an aluminium panel draws attention to the tourists' next destinations.

Flexible system But it isn't just the appearance that makes the signs so successful. They are also immensely practical: additions are easy – simply remove a wood panel and replace it by an aluminium info panel. The new panel is quickly hooked in thanks to a sophisticated grid pattern which has no visible screws and allows using the sign on both sides. The wood panels are from regionally grown larches, untreated, weather-proof and very hardy. Matched with aluminium panels, they are excellently suited to serve as a routing system. Stability is provided by the stands which are made of galvanised steel and further

enhance the appearance of the design. The design, by im-plan-tat Raumplanungs-GmbH & Co KG, has another benign effect on the community: it allows reducing the overall number of local signs and helps tourists get around more easily.

Strengthening regional identity

.... The use of one and the same routing system for two communities helps sustain the local development strategy in the region. Different colour schemes and the striking design of the regional logo make sure that distinctions are maintained and each community comes into its own. ■■■

FLEXGANTRY ON GANTRYBASE

Safety from flexibility

The articulated A-support is fitted to the sliding concrete guide wall by foot joints. Pin joints allow for twisting.

In an accident on the A10 motorway, the articulated sign bridge averted the worst when a semi-trailer demolished the concrete central guide wall across a length of 150 metres. The truck was a total write-off but the driver remained unharmed.

The spectacular crash occurred on 6 April 2015, a few minutes after 5 am on the Tauern Motorway (A10) next to Golling/Salzburg. The load on the truck had come unstuck, causing the vehicle to skid and crash into the concrete wall between the two lanes. The wall was severely damaged for a length of about 150 metres, but the gantry, mounted on a concrete retention system, survived the crash almost unharmed.

How was that possible?
It was a Flexgantry design.

Little damage This accident serves to demonstrate the safety and economic advantages of the Flexgantry model. With no rigid obstacles in the central reser-

vation no humans were hurt and the construction itself suffered only minimal damage. Another crucial advantage was that the motorway could be immediately returned to normal operation as the traffic control system continued to work throughout this section of the A10.

Quick repair Another difference between standard road sign gantries and Flexgantries is in the scope of repair works after an accident. A traditional gantry would probably have required a new central post, possibly also a new beam. Flexgantry called for some minor works only: replacing some of the threaded assemblies, repairing the anti-corrosion paint at the front A-post, and exchanging the gantrybase joining element due to chipped concrete.

Form follows function:
a varied design adds optical
appeal to the noise barrier.

2FOLD NOISE BARRIER

New noise barrier for S6 neighbours

Some of the people living next to the S6 still suffer seriously from the noise impact. In order to improve the situation as quickly as possible, AFINAG has for several years been installing noise protection systems in the Mürz valley.

In early 2012, the agency responsible for financing motorways and carriageways AFINAG tendered a contract for the design of the noise barriers S6 to S36 in Lower Austria and Styria. The winning design was implemented along some sections of the S6 already in 2012 and 2013. Forster Metallbau also won the contract to carry out the innovative winning project, a noise barrier developed by Viennese architects raum-werk-stadt, for the next sections.

Kindberg barrier Ever since the new noise barriers have been installed, suffering residents of Kindberg can breathe more freely: the unbearable traffic noise is a thing of the past. The innovative system, fitted along 700 metres of the motorway, is an effective day and night protection against traffic noise. The barrier has a colour scheme matching its surroundings and the 2Fold modular system allows for interesting combinations of aluminium and glass.

Leoben-Göss and Bruck barriers

.... Already in the past year, Forster set up noise barriers along both lanes of the S6 between Leoben-Göss and the eastern exit of Leoben. As a result, noise-ridden residents of Leoben-Göss experienced a substantial improvement in their well-being. Another step towards protecting people against traffic noise is now being taken at Bruck where an effective noise barrier is being installed for the neighbours.

Two folds The 2Fold system is basically made up of four steel supports which are bent at two places varying from post to post. The four supports, which are furthermore twisted around their longitudinal and cross axis, offer 72 combinations for the bays inbetween them. Panels designed in three shapes (rectangle, triangle and parallelogram) fill in the bays. 

IMPROVING QUALITY OF LIFE

Your personal noise screen

Blessed peace in your own home is becoming a veritable luxury. Especially when your surrounding changes over the years so much that it requires a major effort to protect yourself against intruding noise.

Quality of life and privacy: increasingly, these two valuable goods can be preserved only by high-quality noise barriers even in a private context. FONOCON® Urban noise screens made by Forster are ideal to protect your home against noise from outside. Not only do they keep away the noise but they also offer a perfect shield to maintain your privacy.

Flexible, aesthetic and long-lived

Made of aluminium, the elements are slim and light, making them easy to install on your own. Flexible in its colour scheme and positioning, the system is ideally suited to obtain an appealing appearance that perfectly blends in with its surrounding. Even transparent elements are available for combination. Once installed, the FONOCON® Urban noise screen requires no maintenance and is very long-lived. A house protected in this manner improves in its value while retaining its locational advantage – altogether an economically sound investment. So get yourself your own oasis of quietness! ☀

Street noise banned from home: FONOCON® Urban noise screens with individually chosen colour scheme.

Noise screens protect your privacy and improve your quality of life.

VIENNA MAIN RAILWAY STATION

Info posts for Austria's largest train station

Austria's most modern railway station was officially opened on 10 October 2014. It has been planned for more than 1,100 trains per day and 145,000 passengers passing through it every day.

The Vienna Main Railway Station, by far the most momentous project of the Austrian Railways ÖBB, was launched on 10-11 October 2014. Itself finished, it is still surrounded by busy construction sites. A new urban quarter is being built on the original site which will build up 109 hectares. Forster was involved in the large-scale project through several signage contracts.

lars then help along passengers at the main entrances to the station.

The shopping mall at the station was also fitted with illuminated info posts to point visitors to the more than 90 shops assembled in the arcade.

Well-illuminated signs steer passengers through the Vienna Main Station.

High visibility from LEDs The illuminated posts of the ÖBB and metropolitan railways are visible from afar. They are made of fibre-glass reinforced plastic and fitted with energy-saving, long-lived LEDs. Info posts were also used outside the new station, to guide passengers and provide them with some initial information. Similar posts and advertising pil-

ÖBB headquarters Directly adjacent to the new station, ÖBB built its new headquarters. Finished in the autumn of 2014, it now houses 1,700 staff working in various departments of the company. For their guidance, Forster supplied its Combiflex Meneo indoor routing system which is renowned for its flexibility: signs can be made by the customers themselves and are easily exchanged. Users can promptly respond to any change and adapt the signage to new staff members or new room uses.

The rooms of the ÖBB headquarters use the flexible Combiflex Mero indoor routing system for their signage.

Sonnwendviertel school campus

Next to the new main station, several newly built schools were opened in the autumn of 2014. Forster supplied and installed the signage to give an artistic touch to the new campus. The edged aluminium signs are coated with high-quality 3M film coloured by Forster and produced exactly to the architect's vision. ☐

More than 650 metres of two-coloured stripes were fitted to keep people from crashing into the glass doors and hurting themselves. The stripes double as an attractive design element.

BRG KREMS

Pointing the way to education

Over the past two years, the secondary high school BRG Krems was given a full-scale refurbishment that included an extension of about 5,000 square metres and a complete restructurisation of its layout. Forster Verkehrs- und Werbetechnik provided the routing system.

Planners were very prickly in their requirements for the routing system: signs should be slim and their content should be quick and easy to change. Consequently, Forster was awarded the contract for the signage in November 2014.

Combiflex Mero Whether simple door signs, small sign posts or fire alarm posters – Combiflex Mero has matching signs that fit to every room. With its slim build and delicate frame of anodised aluminium, Combiflex Mero captivates by its laid-back design. The non-glare acrylic glass cover can be removed from the top, allowing an easy and quick change of the label. Signs come in various sizes to increase the system's flexibility.

Safety Planners took into account the new requirements of Austrian Standard ÖNORM B1600 to be met by glass doors and glass surfaces.

Moreover, warning, information and caution signs were installed throughout the building, so that it complies with the European standard of ÖNORM EN ISO 7010 that lays down rules for safety colours and safety signs.

No barriers A tactile guidance system on the forecourt gets everybody safely into the newly refurbished lobby. The tactile layout plan was also furnished by Forster. ☐

THE NEW AUGSBURG CITY ARCHIVES

More space for the "Memory of the City"

A mobile shelving system, fitted with a digitally imprinted end panel, was installed in the reading room.

Maximum storage capacity typically is the foremost concern that planners of archives have in mind. Fortunately, FORREG shelving systems work miracles when it comes to storage space.

Historic deeds of the Augsburg City Archives date back to the 11th century, making the institution one of the foremost community inventories of Germany and Europe. It harbours an abundance of historic treasures illustrating the city's administrative, cultural, economic, social and everyday life through the ages: 11,500 metres of files and official records, 5,000 deeds, 40,000 historic maps and drawings, 350,000 photo negatives and prints, 20,000 posters, films and videos, collections of news-

papers, magazines, cuttings, sound recordings and digital media, 500 metres of index files from the registrar's office and a specialised library comprising 35,000 volumes. The City Archives serve as a central facility for the city's urban administration and also keep files collected by clubs, associations, families, guilds and businesses.

From factory to archival location

.... When the "Memory of the City" was in need of a new home, the listed production and office buildings of a defunct textile company were converted from 2012 onwards. Offering altogether 4,450 square metres of space, the premises now house the historic records in an optimal environment in magazines kept at stable climatic conditions and fit-

ted in line with the latest conservational and archival requirements. A pioneering achievement was the architecturally well-rounded solution found for the magazine rooms which, on their 3,200 square metres of space, were furnished with a double-decker mobile shelving system on a specially constructed steel platform. The result is some 26 kilometres of shelving to accommodate the valuable records.

A question of stability Arbitec Forster was awarded the contract to supply and install the shelving system in early 2013. Works on the execution of the contract started in June 2013. The two-level system was constructed as a walk-on steel platform with gratings, staircases and railings. Before it could be put in, a stress analysis had to be carried out with the client, engineer and architect. The Forster engineers then implemented the specific requirements down to the last detail. First they laid the rails for the shelving system into the unfinished concrete floor, after which the intermediate landing envisaged by the architect could be put in. Installation proceeded section by section from July 2013 to May 2014.

Well-structured archives

Arbitec-Forster found the best suited solution exactly tuned to the specific requirements of the records to be stored and the locational situation. Contrary to original plans, the construction of a new intermediate landing increased storage capacity by about 35%. Fully fitted with the requisite accessories, the inventories can now be properly stored and will be ready for use in part by the summer of 2015 and fully from the summer of 2016. 

An intermediate landing was fitted to accommodate the two-level shelving system.

Membrane keypads and front panels are produced at clean-room conditions.

INDUSTRIAL SCREEN PRINTING

Pure quality

Membrane keypads and front panels join man to machine. As they become a pervasive feature Forster produces them using screen printing technology of maximum precision at clean-room conditions.

Working at clean-room conditions is getting ever more important for much industrial production. It is not just semiconductors or medicinal products that require a controlled environment for their production, but Forster needs to maintain clean-room conditions for an increasing number of its own products. Quality requirements posed by its customers have made it necessary to invest heavily into industrial screen printing and create clean-room conditions.

Clean-room category Forster is currently converting several manufacturing processes, installing screen printing presses and dryers in a separate part of its production hall. This section is dedicated to the production of multiple printing processes that require particularly clean air. Once the conversion works will be finished and the clean-air facilities have been fitted together with their control systems, the production area will comply with clean-room category 7 under DIN EN ISO 14644-1.

Part of a casing made by Forster in practical use.

Diversified production Decorative and front film, membrane keypads, sheet-steel and casing sections – they have for many years been part of the range of products made by Forster. Depending on the use they are put to they can be coated with a variety of surfaces, materials and decorative paints and fitted to base plates or mounting systems. Forster's new offer of production at clean-room conditions has been introduced at the bequest of customers.

Using state-of-the-art technology and efficient processes, Forster is – as always – a competent partner for industrial screen printing. Famous names in the automation and electric industries trust in Forster's known quality and reliability.

…♦ RETIREMENTS

Waidhofen/Ybbs:

Klaus Scheuchel

St. Peter/Au:

Christine Kirchweger

Renate Gruber

Karl Ossmann

Franz Ricker

The management wants to express its gratitude and appreciation for their long years of loyalty to the company and extends its best wishes for their new life phase!

…♦ ANNIVERSARIES

Arbitec-Forster

25 YEARS

Cornelia Kirschbaum, Bernd Haase

20 YEARS

Norbert Ziemer

The management wants to express to all celebrants its gratitude and appreciation for their long years of loyalty to the company and looks forward to continuing our excellent cooperation.

Early in 2015, **Klaus Scheuchel** took his well-deserved retirement. Joining the company in 1981 he worked as an expert adviser in the field sales staff, serving our customers in the north of Lower Austria for almost 35 years. Finally enjoying more leisure time, Klaus Scheuchel will be frequently found hiking in the mountains. To usher him into his retirement, his colleagues organised a party.

A party was organised to accompany Klaus Scheuchel into his retirement.

…♦ DEATHS

Waidhofen/Ybbs:

Karl Haberfehlner

Alois Kerschbaumer

…♦ OCCUPATIONAL TRAINING

Matthias Riedler (metal fitter, mechanical engineering module) completed the first form with **excellent success**, and *Tobias Schraml* (metal fitter, mechanical engineering module) completed the second form with **excellent success**.

Tobias Beck (metal fitter, mechanical engineering module) completed the fourth form with **excellent success** and passed the apprenticeship completion exam with good success.

Patrick Forstenlechner (printer, focus on screen printing) completed the second form with good success, and *Armin Duric* (printer, focus on screen printing) completed the first form with good success.

Patricia Schreil (trainee industrial manager) completed the first form with good success, and *Elisabeth Großmayr* (trainee industrial manager) passed the traineeship completion exam with good success.

Our congratulations on their excellent performance and our best wishes for their further career!

Sports and leisure

Football

Forster in the finals

Already back in autumn, the Forster team made it into the fourth round of the AKNÖ/ÖGB Company Football Cup of 2014/2015. After a dramatic penalty shootout against SG Leyer & Graf, they gained the finals with a score of 5:4. On 21 June, the team got worsted against OMV Gänserndorf (5:3) and Gebauer & Griller (6:2). In both games, the team started out well by taking the lead at 1:0 but was unable to keep up its performance for the full 90 minutes. The finals were won by PVA St. Pölten.

AKNÖ President
Markus Wieser congratulates the
Forster team for its fourth place
in the Company Football Cup.

Waidhofen Town Run

Good runners, strong team

On 25 April 2015, the long-established 31st International Sparkassen Town Run was held under a bright sun. The crowd was in a festive mood and enthusiastically cheered our team on to win the first, eighth and ninth ranks at the Fit@Work team trials. Forster's runners also did excellently in the main race, with four of them placing among the first 40.

The effort paid off in excellent
rankings: participants in front of
the town fountain.

Lower Austrian Company Skiing Championship

Forster ski team wins vice-championship title

The 43rd State Company Skiing Championship was held at the very best conditions on 7 February, organised by WSV Puchenstuben. Following up on past successes (when Forster quite frequently won the State Champion title), the team this year managed the second-best result of the day. The new Lower Austrian Company Skiing Champions were the team of Ing. Viktor Gusel and, for the ladies, the team of the Scheibbs Hospital.

Tobias Schraml (right) carried the day for Forster in the youth category.

Family skiing party

Forster Skiing Championship of 2015

Conditions were perfect when this year's company alpine skiing and snowboarding championships were held on the Forsteralm on Saturday, 31 January 2015. The neck-and-neck race for the champion's title was won by Thomas Spacil, who clocked up the day's best time and relegated Raimund Hüttenbrenner and Manfred Kalkhofer to second and third places. The ladies' races were won by Dorli Hofmacher (women's best time of the day before Regina Spacil), Daniela Dürauer, Maria Grottenthaler and Katharina Kalteis. The Forster race of 2015 was also enthusiastically attended by a host of children and young people.

Organiser Fritz Auer with the two day's best time winners Dorli Hofmacher and Thomas Spacil. Prices were awarded by Doris Wöginger and Raimund Hüttenbrenner (left to right).

Left to right: Fritz Auer, Martin Präuer, Helmut Kloibhofer, Harald Freudenschuß, Alwin Springer, Jürgen Fluch, Andreas Reitbauer, Christoph Schaupp, Erich Hiesberger, David Heigl, Dominic Plank, Andreas Kammerhofer, Josef Sattler, Walter Trawetzky (not pictured).

WINGS FOR LIFE WORLD RUN

**„Compete with
the world“**

Forster sent its best runners to the Wings for Life World Run in St. Pölten on 3 May 2015. Running for charity was exactly the thing to do – as the runners had done in the previous year. Altogether 13 runners competed to support the Wings For Life Foundation and research into treatments for spinal cord injury.

Senior tennis

European Senior Open

In a great achievement, Jürgen Florian placed third at the European Senior Open tournament held for some 600 players at Seefeld/Tyrol in late January. Starting out strong in the 40+ category, Jürgen Florian then had to give way to Matthias Müller from Germany in the semifinals. But what a performance!

Fishing tournament

Winner takes 18 kg of fish

Ideal weather conditions and high spirits once again turned the fishing tournament organised by the Forster Leisure Club into a huge success. Fourteen adults and three children entered this year's competition on 30 May 2015, held for the sixth time in the Laziland of St. Peter in der Au. And their catch was substantial: The winner was Robert Haneder who caught altogether 18 kg of fish. The winners were then properly feted with good food and in a good mood at the Lazelsberger inn.

Tennis

Get the right topspin for the new season

After the excellent take-up rate in past years, the tennis courts at Gstadt (two sand courts and a club house) are once again open to Forster staff members free of charge. Rackets and balls are available for those who want to take trial lessons. For the keys and directions for use simply contact the human resources department.
